CHAIRMAN'S LETTER

Dear Shareholders,

Last year, I shared the momentous news that Holcim had invited Ambuja to merge with Holcim India – a union that would make ACC Limited a subsidiary of Ambuja. I am happy to inform you that we have completed all formalities and are awaiting FIPB clearance. I am hopeful this will be obtained soon and we can begin a new chapter in our company's history.

For the cement industry, 2014 was a year of consolidation. Most companies continued to struggle with weak demand, excess capacity and falling prices. In the face of these challenges, it gives me great pleasure to announce that the company has performed well, recording top line growth in EBITDA, revenue, and PAT. Our net sales and profit increased by 9% and 16%, to ₹ 9,911 crores and ₹ 1,496 crores respectively, over the previous year. This outcome is certainly the result of our 'Operational Excellence' programs, and the untiring efforts of our people to make Ambuja a better, more efficient company.

The future for the industry looks positive with the new government's focus on development of infrastructure and housing. Moreover, a rise in GDP from these initiatives would provide an additional impetus for the cement industry, given the strong correlation between GDP growth and India's per capita cement consumption, which still ranks below the world average.

Since Ambuja's inception, we have dedicated ourselves to being the 'most sustainable cement company'. This reflects our deep concern for the scarcity of natural resources that faces us – an issue that will only intensify for future generations. Because our industry is particularly resource-intensive, we have committed ourselves to continually reduce our consumption of non-renewable resources and decrease CO₂ emissions.

Many of our initiatives in this area have started to bear fruit. Our work with water conservation has made us the only 'water-positive' cement company in India. We have also made concerted efforts to find alternative fuels. These initiatives have been recognised and awarded by industry bodies like CII and ASSOCHAM. Our wider CSR efforts were recently acknowledged in the Harvard Business Review as successful on a holistic level.

These achievements have only deepened our people's 'I Can' spirit to continue our journey towards sustainability. This year, with the assistance of KPMG, we developed an entirely new index to gauge our impact in the social sphere. This index, called 'True Value', lets us ascertain the social and environmental impact of our activities, now, and in the future. We believe it will help us to continually better ourselves, while protecting the communities and resources around us.

We are also committed to improving the health and safety of our employees, subcontractors, third parties and visitors. Our safety initiative, 'We Care', covers all our stakeholders and is driven through top management commitment and visible leadership across all levels.

Our customers have always been at the heart of our efforts, and we continue to provide excellence to them through innovative products and solutions. We recently launched Ambuja Plus, a premium quality cement product aimed at individual home-builders. Last year, we were able to reach out to thousands of customers across the country by providing end-to-end, value-added technical services, through initiatives like the Ambuja Knowledge Centres, which provide know-how to construction professionals.

Today we stand at the threshold of another year that will hold many challenges. I am sure that the 'I Can' spirit of our people will turn every trial into an opportunity. With our enduring focus on sustainability, safety, efficiency, quality, and with the support of all stakeholders, I am sure the company will scale new heights and set new benchmarks for the industry.

With warm regards,

N. S. Sekhsaria

Except for the year 2010, the rest of the year's figures are based on Revised Schedule VI

HOW DID WE RAISE PRODUCTION AND REDUCE COSTS?

*By running out of the
key component in cement production.*

It was a shortage that threatened to halt the entire plant's operations. Last November, the Ropar plant faced an acute shortage of dry fly ash - an essential component in the production of Ambuja Cement. Without an adequate supply, the plant's very future would soon be in question.

The engineering team needed to find a viable solution, and fast. The only alternative was to use wet fly ash. However, the wet form chokes the machinery and so it needs to be dried. But the cost involved in the conventional manner of drying wet dry fly ash was impractical - an investment to the tune of 100 crores.

It was this unforeseen circumstance that brought about an unprecedented idea - what if a mix of biomass could offset the problems involved in drying wet fly ash?

Time was not on their side and neither was history. A series of unique experiments followed. With no data to refer to, the engineers had to rely on a mixture of trial-and-error and their extensive knowledge.

The results were sensational. The operations not only stabilised, they were more productive. The plant increased the quantity of dry fly ash from 100 tonnes to 160 tonnes. And all this at a much lower cost.

This success story translated into not only huge savings but reduced dependency on external vendors. The innovation is now ready to be replicated in other Ambuja Cement plants across the country. It was the 'I Can' spirit of our team that converted an overwhelming problem into a path-breaking innovation.
