#### DIVIDEND

In view of losses, the Directors regret their inability to recommend any dividend for the year ended 31st March, 2002.

#### **OPERATIONS**

#### Tea Division

The year under review was difficult for the Tea Industry as a whole and for the common variety of teas, particularly, the prices of which have had an easier trend through out the year. The crop has been a bit higher on all India basis, but there were no adequate takers, which resulted into widening the gap between demand & supply. The concept of bought leaf factories, further compounded the problem.

During the year under review, Ananda Tea Estate has performed satisfactorily in harvesting the crop, almost in line with the industry. The average realisation fell steeply by over 6% but far better than the industry average of about 12%. It appears that the continuous thrust on consistency in quality along with the aggressiveness on improving field practices have started to pay off. The cost of production continued its unabated rise in all areas like fuel, labour etc.

The Outlook of common variety of teas, appears to be gloomy in view of depressed market conditions and increase in costs like labour wages, power & fuel, fertilizers etc. However, the Company is confident to tide over the difficult scenario due to adherence to the policy of manufacturing quality tea, which are in short supply.

#### **Textile Division**

The year under review was one of the worst periods for the cotton textile industry, which has suffered on all fronts due to a number of factors varying from spilling the fears of economic slowdown, attacks, border tensions etc. and the Company could not have been an exception. The first half of the year was particularly severe due to disparity in the prices of cotton and finished goods, both at domestic and international levels. During the second half, when the markets were improving, the communal tensions started to play havoc, particularly in the areas, where the production facilities of the textile division of the Company, is located.

During the year under review, the production of cloth and yarn was adversely affected by about 21% & 19% respectively. However, the sales volumes were not affected in that way, which were lower by about 9% & 12% respectively, thereby decreasing the stocks to a great extent. The average realisation was also lower due to mismatch between demand & supply.

During the year, the modernisation project, partly financed by IDBI, has been completed almost on schedule, the benefits of which, along with the other projects completed in recent past, are likely to accrue from current year onwards. The Financial Institutions have re-scheduled the repayment terms of their outstanding loans by increasing the moratorium period, in line with the course of action followed with the industry as a whole.

## BENGAL TEA & FABRICS LIMITED.

## DIRECTORS' REPORT (Contd.)

The future prospects of the division appears to comfortable, considering the prevailing trends of current financial year, so far. The demand has been picking up steadily at both domestic & international levels, without any substantial adverse impact on margins. The full impact of sales-tax deferment scheme introduced by the State Government of Gujarat, is yet to be realised. Barring unforeseen circumstances, the textile industry, which has passed through a very difficult phase, appears to be out of woods and the Company would also not be an exception.

#### CORPORATE GOVERNANCE DISCLOSURE

## **MANAGEMENT DISCUSSION & ANALYSIS**

**Business Seaments** 

#### **Textile Division**

Industry Structure & Development: The Textile Industry has passed through a very difficult phase in the run-up of Post-WTO scenario and geared itself for its survival. The encouragement given by the Government for modernisation by providing concessional finance through Technology Upgradation Fund Scheme (TUFS) has played a key role for its present status. The modernisation of machineries, reduction in excise duty on fabrics, reducing prices of raw cotton, impact of reduction in retrenchment compensation and deferment of sales tax etc. are some of the feel-good factors that would have positive impact on the Company.

Opportunities & Threats: During the Post-WTO, the textile products are expected to entail competition from low cost producer countries, however the break through in respect of production of BT Cotton, is expected to benefit by way of lower cotton prices.

Product wise Performance: The production as well as the average realisation of both the textile products, namely Cloth & Yarn; has suffered during the last financial year, due to series of a number of events ranging from attacks to communal tensions. The figures of performance on production and sales front have been embodied in the Accounts itself. The average realisation for both the products has been as under:

Name of the Product	Unit	2001-2002 (Rs.)	2000-2001 (Rs.)	Change (%)
Cloth	Per Mtr.	28.46	29.07	(-)2.10%
Yarn	Per Kg.	111.62	119.91	(-)6.91%

Outlook: The future performance depends on the prices of raw cotton at one side and demand of textile products at other side. Barring unforeseen circumstances, the Textile Division of Company, is expected to reap the harvest, considering the prevailing trend.

Risks & Concerns: Being an agro-based industry, the foremost risk associated with it, is the weather conditions for production of cotton in addition to the inherent concerns in respect of political, economical and other situations prevailing in the territories, in which the respective units carry out their operations.

Discussion on financial performance with respect to operational performance: The textile division has been pushed into red due to mismatch between demand & supply, at one hand and disparity between the prices of raw material & finished goods, at another, despite of serious steps taken by the management to reduce the costs at all possible stages. The division has completed its modernisation project, partly financed by IDBI to the extent of Rs. 70 millions.

#### Tea Division

Industry Structure & Development: The Tea Industry has been brewing a bitter taste since the removal of quantitative restriction. Of late, the concept of bought leaf factories has been gaining momentum & there appear to be change in the strategy of manufacturers to produce CTC category in lieu of Orthodox category. The Company is expected to outperform the industry, due to better than average yields and better quality.

Opportunities & Threats: The permission of Foreign Direct Investment (FDI) in plantation sector is expected to give boost to the Industry. However there also lies the risk of import of lower quality of teas from low cost producing countries.

Product wise Performance: Though, the production of black tea has increased, due to purchase & processing of more green tea leaves, but the average realisation has suffered during the last financial year. The main reasons for such fall were lower international demand for common variety of Indian teas and change in strategy of tea producers. The figures of performance on production and sales front have been embodied in the Accounts itself. The average realisation has been as under:

Name of the Product	Unit	2001-2002 (Rs.)	2000-2001 (Rs.)	Change (%)
Black Tea	Per Kg.	81.16	86.57	(-)6.25%
