MANAGEMENT DISCUSSION & ANALYSIS REPORT

2022 was a positive year for the Offshore Support Vessel (OSV) sector, as it consolidated and built upon the gains seen in 2021. OSV demand grew by a further 8% last year (now up by 19% vs start of 2021) on the back of increased drilling and offshore field development activity. Moreover, OSV supply remains "manageable" (following several years of rebalancing) with the size of the fleet still 4% below the 4th quarter of 2017 peak and the order book falling to approx. 100 units (just 3% of the fleet). Against this, OSV markets tightened further in 2022, with global OSV utilization rising to 71% by end 2022, up by 5 % year on year. Sentiment remains optimistic that 2023 will bring further improvement.

THE INDUSTRY :

- i) The market for both Anchor Handling Tug and Supply Vessels (AHTS) and Platform Supply Vessels (PSV) continued on an upward trajectory across year 2022.
- ii) By end 2023, utilization is expected to reach 77% before firming to 82% by end 2024.
- iii) In recent years, OSV's have become increasingly technologically advanced and are now capable of performing many duties in addition to their primary purposes. More recently, increasing pressure from Charterers to reduce emissions has seen owners retrofit existing vessels with battery packs (particularly in PSV fleet).
- iv) As of February 2023, there were a total of 4472 vessels in OSV fleet, This included 1611 PSVs of more than 1000 dwt, along with 1829 AHTSs of more than 4000 BHP.
- v) OSV demand reach 2364 active vessels (AHTS >4000bhp, PSV > 1000dwt) by February 2023, a 6% year on year improvement.
- vi) OSV utilization was 69% having peaked at 71% in late 2022.
- vii) A combination of continued modest supply side growth (0.4% across 2022-23) and firmer demand is contributing to an optimistic outlook for the sector.
- viii) The outlook is not without risks, particularly current macroeconomic headwinds feed through lower demand and price.
- ix) Energy prices are likely to remain supportive of offshore activity in 2023, despite some uncertainty as to how they will precisely trend.
- x) It is estimated that oil price may average \$ 88/ bbl in 2023 and \$ 83/ bbl in 2024.
- xi) OSV demand is projected to improve by a further 10% in 2023 and 7% in 2024.
- xii) Small AHTS demand growth in the east of Suez market showed positive signs in 2022 and is expected to be firmer in 2023.

OPPORTUNITIES & THREAT :

Energy markets have had an extraordinary 2022, sparked by Russia's invasion of Ukraine and subsequent retaliatory action. But the full effect on the oil market has yet to be seen. It is expected the oil market to be in deficit through 2023, which should see oil prices move higher.

Russian oil exports have proved to be more stubborn this year than expected. While oil bans and self-sanctioning from a handful of buyers have certainly had an impact on flows, the willingness of other buyers to pick up discounted Russian crude oil has largely offset reductions elsewhere.

However, the largest disruption to oil flows still lies ahead. The EU, which is the largest buyer of Russian oil, is set to see a ban on seaborne imports from Russia come into force for crude oil and refined products. The big question is whether China, India and a handful of other buyers are willing and able to pick up this oil.

Their ability to absorb significantly more Russian oil is likely limited, so it is believed that Russian supply will have to fall more aggressively. Russian supply is likely to fall by a little more than 2mn bl/d in 2023.

The other unknown is how successful the G7 price cap on Russian oil will be, if and when it is implemented. It will be difficult to convince big buyers to follow the cap, and there is always the risk that Russia reduces supply as a result. This would have the opposite effect of what is intended with the price cap.

Opec+ surprised the market with the magnitude of its announced supply cuts in October. The group agreed to reduce production targets by 2mn bl/d from August 2022 target levels, in response to concerns over demand. The cuts will run from November until the end of 2023.

However, given the bulk of producers are pumping well below their target levels, the actual supply cut will be c.1.1mn bl/d. While this is significantly below the headline number, it is still enough to dramatically change the outlook for the oil market in 2023. It was expected the market to be in small surplus over the first half of the year. However, lower Opec+ supply pushes the market firmly into deficit in 2023.

The lack of response from the US industry also appears to have given Opec+ the confidence to cut supply without the fear of losing market share to non-Opec producers, as seen in previous years.

It is becoming increasingly clear that the days of US producers pumping as much as they can are well and truly behind us. Instead, the top priority of the industry is maximizing shareholder returns and, with that, showing restraint when it comes to capex.

Despite the bullish outlook, it is still worth identifying where the floor for the market could be. The US administration has made it clear it will look to start refilling strategic petroleum reserves - which were heavily tapped into this year - should WTI trade down to c.\$70/bl. This should provide a solid floor to the market. But it could see Opec+ intervene before the market has the opportunity to trade down to these levels.

OUTLOOK :

The outlook for demand through 2023 is becoming increasingly uncertain as the macro picture deteriorates. For now, oil demand is forecast to grow by 1.7mn bl/d, but there is downside risk given the global macro picture, along with uncertainty around China. A large share of demand growth next year is driven by expectations of a recovery in Chinese demand.

Operational Performance:

During the year under review, 3 of 6 vessels were sold during the year. "Post" the year under review, in May, 2023, one additional vessel was sold. The average age of the Company's fleet stands at just over 14 years. Both the vessels are on long term Contracts.

As regards Netherlands subsidiary, the only remaining Vessel in the fleet was on a long term contract in Angola. Unfortunately, in view of an Engine Motor problem, the vessel lay idle for 4 months of the year. The vessel was, post the year under review, contracted for sale.

Your Company is keenly aware of the need to ensure that costs are monitored closely and monies are spent prudently in order to be able to obtain the highest value out of all maintenance and repairs, while at the same time conserving precious funds.

Financial Ratios :

Pursuant to the Provisions of Schedule V – Part B, Clause I, Sub-Clause (i) & (j), the details of the significant changes in the financial ratios (i.e. change of 25% or more as compared to the immediately previous financial year) are as follows :

- 1] Debtors turnover ratio : N.A.
- 2] Inventory Turnover Ratio : Not Applicable.
- 3] Interest Coverage Ratio has declined by (2150.93%) This is due to reduction in operating margins as a result of vessels remaining idle for extended periods during the year.
- 4] Current Ratio has increased by 729%. This is due to a substantial decrease in short term borrowings in view of settlement arrived with secured lender Phoenix ARC Pvt. Ltd.
- 5] Debt Equity Ratio has reduced by 98%. This is due to substantial decrease in debt in view of settlement arrived with secured lender Phoenix ARC Pvt. Ltd.
- 6] Operating Profit Margin has reduced by 143.56%. This is due to reduction in sale and corresponding operating profit while costs remained approx. the same.
- 7] Net Profit Margin Ratio has increased by 545%. This is due to "write back" of debt as of result of the settlement made which in turn contributed to increase in profit.
- 8] Return on Net worth has increased by 263%. This is due to "write back" of debt as of result of the settlement made which in turn contributed to increase in profit.

RISKS & CONCERNS:

The Offshore Industry faces two main challenges – maintaining the existing assets in the field and creating new platforms that are capable of exploiting future oil and gas deposits. In each case, industry expertise and engineering innovation will be required to deliver these goals.

In 2022, the results of a supply shock with a tight oil supply and supply disruptions drove the price of oil well north of \$100 / barrel to near record highs. Volatility is likely to continue for some time. Potentially in the not so distant future, the world could see an oversupply scenario, if OPEC makes good on its commitment to continue unwinding the supply cuts it made in 2020, and U.S. unconventional production grows as much as some analysts are forecasting. If these events occur (and of course the effects of the war tapers off), organizations may end up with an oversupply of oil, with as much as an extra 6.4 million barrels per day late this year. Add to that a potential new nuclear agreement with Iran and the volume of new oil coming onto the market this year will be even higher; some estimates have Iranian exports growing by up to a million barrels a day within a few months if a new pact is struck. Of course, if a U.S.-Iran deal occurs, it might factor into OPEC's decision to continue unwinding its cuts.

However, as of now, on the flipside, Russia's invasion of Ukraine, and the risks that it will lead to a further curtailment of Russian oil exports – including more drastic measures from Europe is keeping price of oil "buoyed". Outrage over the invasion has led to some self-sanctioning by western buyers; the US has already initiated a ban on Russian oil, and the European Union (EU) is actively contemplating one. The IEA currently predicts as much as 3mm bpd of Russian exports could be taken off the market. On to the demand side, higher energy prices from the Ukraine crisis could have a knock-on effect on international economic growth.

Meanwhile, China's economic and environmental policies may slow down economic expansion, and therefore decrease its demand for oil. This could have a ripple effect on the global economy, making forecasts of increased global oil demand of 3.3 million barrels per day illusory.

For the time being, a tight oil market is experienced, although many are forecasting a growing oil surplus beginning in the second half of the year.

The Notice can also be accessed from the website of the Stock Exchange i.e. BSE Limited at www.bseindia.com. The AGM Notice is also disseminated on the website of CDSL (agency for providing the Remote e-Voting facility and e-voting system during the AGM) i.e. www.evoting@cdslindia.com.

THE INSTRUCTIONS FOR SHAREHOLDERS FOR REMOTE E-VOTING ARE AS UNDER:

- (i) The voting period begins on Tuesday, 26th September, 2023 from 10.00 a.m. and ends on Thursday, 28th September, 2023 at 5.00 p.m. During this period shareholders' of the Company, holding shares either in physical form or in dematerialized form, as on the cut-off date Friday, 22nd September, 2023 may cast their vote electronically. The e-voting module shall be disabled by CDSL for voting thereafter.
- (ii) Shareholders who have already voted prior to the meeting date would not be entitled to vote at the meeting. The shareholders should log on to the e-voting website: www.evotingindia.com.
- (iii) Pursuant to SEBI Circular No. SEBI/HO/CFD/CMD/CIR/P/2020/242 dated 09.12.2020, under Regulation 44 of Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, listed entities are required to provide remote e-voting facility to its shareholders, in respect of all shareholders' resolutions. however, it has been observed that the participation by the public non-institutional shareholders/retail shareholders is at a negligible level.

Currently, there are multiple e-voting service providers (ESPs) providing e-voting facility to listed entities in India. This necessitates registration on various ESPs and maintenance of multiple user IDs and passwords by the shareholders.

In order to increase the efficiency of the voting process, pursuant to a public consultation, it has been decided to enable e-voting to all the Demat account holders, by way of a single login credential, through their Demat accounts/ websites of Depositories/ Depository Participants. Demat account holders would be able to cast their vote without having to register again with the ESPs, thereby, not only facilitating seamless authentication but also enhancing ease and convenience of participating in e-voting process.

- (iv) In terms of SEBI Circular No. SEBI/HO/CFD/CMD/CIR/P/2020/242 dated December 9, 2020 on e-Voting facility provided by Listed Companies, Individual shareholders holding securities in Demat mode are allowed to vote through their Demat account maintained with Depositories and Depository Participants. Shareholders are advised to update their mobile number and email id in their Demat accounts in order to access e-voting facility.
