9.	Profit available for Appropriation	1416.76	2539.74
10.	Balance carried to Balance Sheet	1416.76	2539.74

FINANCIAL HIGHLIGHTS AND OPERATIONS

Income from operations during the financial year ended 31st March 2016 was at INR 16210.59 Lacs as against INR 18532.69 Lacs representing a decrease of approximately 12.5% over the previous year. Profit after Tax for the year under review amounted to INR 1416.76 Lacs as against INR 2539.74 Lacs in the previous year representing a decrease of 44.21%. The decrease in sales and profit during the year under review is basically due to the overall draught situation in the country resulting in excessive sales return and reduction in margins to the company. However, the monsoon forecast for the coming year is good and your company is also geared up with products to operationally gain from the same.

RESEARCH & DEVELOPMENT & NEW PRODUCTS

Your Company remains committed towards strengthening its Research & Development programs. In spite of rather difficult conditions existing in seed business, your company has allocated significant resources to provide further impetus to the research initiatives. The competitive scenario in hybrid seeds industry keeps intensifying over time. In order to enhance competitive ability, your Company has made persistent efforts to offer high yielding hybrid varieties of seeds which carry built-in added value through seed embedded technologies/genes, thereby providing durable protection to the Indian farmers against specific diseases, pests and vagaries of nature.

The modern Indian farmers prefer seeds of high potential yield with multiple layers of value addition. Your Company has over the years reached out to farmers in the rain-fed & relatively un-reached regions across the Country and delivered quality seeds. NBIL is pursuing both Genetic

Engineering Technologies as well as Molecular-Aided Selection systems to augment its crop breeding and product development programs.

Cotton: NBIL possibly is the sole company in India which offers a choice between Bt-Cotton seed technologies. Your Company provides a wide range of Bt-Cotton hybrids to suit the farmer requirements across various Cotton growing agro-climatic ecologies in India. NBIL has incorporated the exclusive Fusion-Bt technology of the Chinese Academy of Sciences (used predominantly all over China and exclusively licensed to Nath Bio-Genes). In addition, your company has also started offering BG-II version.

The seed industry is intensely research-oriented, where it is typical for a new trait to be developed over a number of years. Your Company's proficiency in the business depends on its ability to constantly hone in on commercially viable crop characteristics that will address present challenges while delivering substantive gains in yields and farm income. This is also the root of research philosophy of NBIL.

Being an important member in the crop-hierarchy of India, Cotton has seen extensive work by your Company's team of scientists. Attention is focused on developing/imparting those characteristics that are generally absent from the market at present. These cover resistances / tolerance to Bollworms and major Sucking Pests, which have emerged as potent threats in recent times. Additionally, given the variability of the monsoon and the lack of plentiful access to water resources in the country, most crops are found suffering from a variety of agro-climatic stress. It is imperative that the hybrid incorporate a certain degree of sustainability to dehydration (drought) and heat stress. Your company has been engaged over the years to enhance useful traits against such known challenges. Some of the qualities that have been incorporated in our products include: -

- Big boll size mitigates need for intensive labor involvement/promotes easy picking.
- Re-flushing ability – in those cases where the farmer would prefer re-flushing (fresh crop of bolls formation) rather than take up a new Rabi crop.
- Re-Structure the plant-type that suits high-density planting, synchronous boll bursting and, thereby, more suited to machine harvesting.

Such traits and characteristics have been assimilated into NBC-101 (re-flushing), NBC-10 and NBC-102 (drought tolerance), which are NBIL's frontline hybrids in Cotton. It is crucial to nurture farmer trust by way of consistent delivery of promised performance. In a competitive landscape, products that provide an edge have earned a distinct share and farmer following. Your Company maintains a deep pipeline of products, each catering to specific requirements. The leading candidates such as NBC-10, NBC-102 and NBC-1022 have all demonstrated superiority in multi-location and large scale trials.

Maize: Within Maize, the emphasis of your Company has been on full-season maturity hybrids, which includes both the single cross/modified single cross segments. Consistent performance in the field and better yields are important attributes in this crop. The acceptability and success of Singhum (NMH-02) and NMH-1008 has been particularly encouraging in the target markets of Bihar, Maharashtra, A.P. and even Karnataka.
