### **Market Scenario**

The year 2011 was unique for the Indian auto industry. The production data of the Indian Automobile Industry for April-March 2011 recorded a growth of 27.45 percent over same period last year.

The Indian automobile industry may not be able to maintain the growth rates registered in the last two years. The high base effect of 2010, the firming up of interest rates and crude oil price change may affect the growth rates in future. The Tsunami, earthquake, disasters in Japan has affected the production of many automotive companies as they were unable to get parts from the suppliers affected by the catastrophe.

The challenges, the automobile industry in the Indian market will face are stable economic environment, healthy IIP growth, favorable liquidity and availability of finance. Other things that would affect the Indian automobile industry include road network development activities, strong growth in construction activities and the expected healthy performance of the industrial sector.

The competition in all car segments would be severe with the launch of new models by many Automobile manufacturers like Toyota, Honda, Maruti Suzuki, General Motors, VW, BMW etc.

The commodity prices are rising which will be putting the pressure on margins of the Automobile manufacturers leading to severe pressure on margins of the Auto component industry.

### **Material Changes**

There is no other material change affecting the affairs of the Company, which has happened between the date of the Balance Sheet and up to the date of this report.

### **Fixed Deposits**
